

Deliverable 1.6.2: Figure pack
summarizing key results

Research Question

Which macro-level factors most strongly and consistently correlate with national fertility rates?

Deliverable 1.1.1: Comprehensive country-year panel dataset integrating fertility, economic, governance, and social variables.

iso_code	year	CPI10	CPI100	WGI	annual_rate	current_usd	deflation	female_participation	fertility_rate	log_gdppc	married_percentage	unemployment
ABW	1960	NaN	NaN	NaN	NaN	NaN	NaN	NaN	4.567000	NaN	NaN	NaN
AFE	1960	NaN	NaN	NaN	NaN	186.121835	NaN	NaN	6.650310	5.226401	NaN	NaN
AFG	1960	NaN	NaN	NaN	NaN	NaN	NaN	NaN	7.282000	NaN	NaN	NaN
AFW	1960	NaN	NaN	NaN	NaN	121.939925	NaN	NaN	6.468887	4.803529	NaN	NaN
AGO	1960	NaN	NaN	NaN	NaN	NaN	NaN	NaN	6.708000	NaN	NaN	NaN

Non-null fraction (overall):

fertility_rate	94.4	female_participation	45.8
current_usd	81.1	unemployment	44.5
annual_rate	78.7	CPI100	2.7
deflation	78.2	CPI10	2.2
married_percentage	68.1	WGI	1.5

Deliverable 1.2.1: Pooled correlation matrices across countries showing macro-level associations.

14	15	CPI100	0	0	NaN	NaN

Deliverable 1.5.1: Results from applying minimum-year thresholds and 1% winsorization.

Partial correlations with 1% winsorization (controls: log_gdppc):			
	var	n	partial_r_winsor_1pct
1	current_usd	14313	0.251679
0	married_percentage	9941	0.179485
7	annual_rate	13784	-0.163023
6	unemployment	7602	-0.129352
8	deflation	13719	-0.095522
5	female_participation	7823	0.094951
3	CPI100	441	-0.057649
2	CPI10	382	-0.033384
4	WGI	260	-0.018890

Why Does This Matter?

Fertility decline will impact labor demographics and consumer markets.

Understanding key correlating factors can provide clues to root issues in society.

Conclusion

Marriage is positively correlated with fertility; GDP per capita is negatively correlated with fertility.

Policymakers should explore causal analysis of relationship factors (e.g., divorce, domestic abuse, dating apps).

Support should target family and household stability, not one-off incentives.
